Geilmann, Wilhelm and Tolg, Gunther.
THE DETERMINATION OF THE SULFATE CONTENT. Pt. 2 of Contribution to Microsilicate Analysis. [1961] 17p. (4 tables, 2 figs. 2 footnotes omitted). Order from SLA mf$2.40, ph$3.30 61-14469

Trans. of Glastechnische Berichte (West Germany), 1960, v. 33, no. 9, p. 332-338.

After digesting the silicate with hydrofluoric and perchloric acids, the sulfate is reduced to H_2S by treating it with a suitable reducing agent. The H_2S is then absorbed in a sodium hydroxide solution and determined by volumetric analysis. This method can be used in the range from 1 to 1000 ug SO_3 and, with samples weighing between 1 and 200 mg, 0.05 to 0.001% SO_3 can be detected. The relative standard deviation of this method is dependent upon the total quantity being determined and lies between 1 and 3%. (Author)

"SIMILAR" THREE-DIMENSIONAL BOUNDARY LAYERS. ('Ähnliche' dreidimensionale grenzschichten.) Theo Geis. March 1961. 92p.
OTS price, $2.25.
(NASA TECHNICAL TRANSLATION F-30. Translation of thesis submitted for degree of Doctor of the Facalty of Natural Sciences and Mathematics to Albert-Ludwigs-Universität, Freiberg (Germany).)

The report discusses the extension of the similarity of two-dimensional boundary layers to the three-dimensional case. The conditions under which "similar" three-dimensional boundary layers occur are discussed, and it is shown that under such conditions the boundary-layer equations may be reduced to a system of two ordinary nonlinear differential equations of the third order with constant coefficients. The constancy of these coefficients is dependent on whether the external flow and geometric parameters
